GREEN ROOF INSTALLATION

Your rooftop is ready to go green! Green roofs provide tons of benefits to your building and the environment. While all green roofs have similar functions, each installation is unique. Projects vary by location, access to sun and rain, building and green roof type and design. **ecospaces** specializes in installing all kinds of thriving green roofs!

GREEN ROOF BENEFITS

Green roofs reduce the heat flux through your roof, and less energy for heating or cooling can lead to significant cost savings. Green roof growing media also retains rainwater and, together with plants, helps to naturally restore our environment.

WHY CHOOSE US?

- ✓ Vibrant, engaging, healthy roofscapes
- ✓ Locally sourced, curated plant selection
- ✓ We work to get you maximum rebates

OUR SERVICES

DESIGN

We work with a team of professional landscape architects
